No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                        Score
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 protein search, using sw model

The products of the invention have analyesic and hypotensive activity. (I) is useful for regulating autonomic functions, such as increasing blood pressure. (I) is useful for treating pain, for manufacturing a medicament for regulating blood pressure, and for treating pain. Agonist and antagonist of (II) are useful for treating acute pain, inflammatory pain and neuropathic pain, for regulating autonomic functions and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention describes a novel C-terminal fragment (I) of an isolated prolactin-releasing peptide (PrRP), referred to as PrRP20 and having a sequence (S1). The invention also describes (1) a therapeutic composition (C1) comprising (I) or a C-terminal fragment of PrRP referred to as PrRP8 and comprising a sequence (S2); (2) a diagnostic method based on antisera against PrRP20 for identification of disorders involving the central nervous system, including those associated with pain or autonomic regulation, where specific antisera against the N-and/or C-terminal domains of PrRP is used to identify alterations in PrRP synthesis or levels; (3) a rat or human receptor encoded by a 1122 nucleotide sequence (S3), fully defined in the specification; (4) treating a person suffering from a disorder regulated by a receptor (II) encoded by a sequence of 1122 nucleotide sequence, fully defined in the specification, located in the contral persons system. by administration an agonist or anterosist to

They may also be used therapeutically, cc. q. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's cd disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; cd disease; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; cd disease; schizophrenia; disorders of growth hormone secretion; cancer; cc diseases; creutritis, epliepsy and many others, also to improve post-operative nutritional status and as vasopressor. Transgenic animals c carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide-expressing genes, as models of cd disease, for drug screening and as source of cell lines. The ligand control of the polypeptide sequences; in receptor-binding assays; for production of Ab and created sequences; in receptor-binding assays; for production of Ab and control of the polypeptide sequences and primers; to identify the function of the polypeptide sequences; and control of the polypeptide sequences; and control of antisers; in drug development; for gene therapy and to develop the control of the polypeptide sequences and primers; to identify the function of the polypeptide sequences and primers; to identify the function of the polypeptide sequences and primers; to identify the function of the polypeptide sequences and primers; to identify the function of the polypeptide sequences and primers to develop the control of the polypeptide sequences and primers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This peptide contains the partial C-terminal sequence of the synthetic CC liqued polypeptide 1992-131 which is capable of binding to a G CC protein-coupled receptor protein. This peptide is used as an antigen to CC prepare rabbit anti-bovine 1992-131 antibodies which are used in binding CC assays. Pharmaceutical compositions containing this ligand may be used as a pituitary function modulator, a central nervous system modulator CC or a pancreatic function modulator. This ligand could have specific CC applications as a prophylactic or therapeutic agent for dementia, CC depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, growth hormone secretory disease, CC hyper-and polyphagia, hyperilpidaemia, hypercholesterolaemia, CC hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, CC spinal injury, transient brain ischaemia, epilepsy, amylotrophic lateral cC degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis scherosis, acute myocardial infarction, infertility, spinocerebellar CC degeneration, bone fracture, trauma, atopic dermatitis, osteoporosis cand/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand CC affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Query Match

The specification describes an agent for modulating CC protection which comprises a ligand polypeptide or a salt, for CC a G protein-coupled receptor (GPCR) protein. The agents for promoting CC protectin secretion can be used for treating or preventing CC hypoovarianism, genecyst cacegenesis, menopausal syndrome, euthyroid or CC hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodistac. The agents for inhibiting protactin CC secretion can be used for treating or preventing pituitary adenomatosis, CC infertility, impotence, amenorrhea, galactorrhea, acromegaly, CC chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright CC syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory CC agents can also be used as contraceptives. The agents for modulating CC choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty CC critis, abnormal saccharometabolism, abnormal lipidmetabolism or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention provides a monoclonal antibody which has a specific reaction with the part peptide of the C-terminal of 1992 ligand or its derivative. The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pituitary function regulatory mechanism (e.g. promotion of prolactin secretion), central nervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 1992 ligand.

The antibodies can be used in diagnosis or to treat or prevent diseases associated with abnormality in the pliuitary function regulatory mechanism (e.g. promotion of prolactin secretion), central mervous regulatory mechanism, and pancreatic function regulatory mechanism. The antibody-based immunoassay can also be applied in clarifying the physiological functions of the ligand and its derivative sequences AAY49290-302 represent peptide fragments of the 19P2 ligand.

AAW31394
This sequence represents a peptide fragment from a novel human type CC ligand polypeptide corresponding to amino acid residues 34 to 53 of the CC sequence represented in AAW31390 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator, a central nervous system modulator or a pancreatic function CC modulator. This ligand could have specific applications as a CC prophylactic or therapeutic agent for dementia depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC trauma, growth hormone secretory disease, hyper-and polyphagia, CC hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, CC Turner's syndrome, neurosis, asthma, rheumatoid arthritis, spinal injury, CC acute myocardial infarction, infertility, spinocerebellar degeneration, CC bone fracture, trauma, atopic dermatitity, spinocerebellar degeneration, CC capable of altering the binding activity of the ligand affecting CC activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Matches

                      This sequence represents a peptide fragment from a novel rat type CC ligand polypeptide corresponding to amino acid residues 33 to 52 of the Sequence represented in AAW31383 and is used in an assay to monitor CC ligand binding to the G protein-coupled receptor protein. Pharmaceutical compositions containing this ligand may be used as a pituitary function CC modulator. This ligand could have specific applications as a central nervous system modulator or a pancreatic function CC prophylactic or therapeutic agent for dementia, depression, hyperkinetic syndrome, disturbance of consciousness, anxiety syndrome, schizophrenia, CC syndrome, growth hormone secretory disease, hyper- and polyphagia, hyperlipidaemia, hypercholesterolaemia, hyperglyceridaemia, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, diabetes, cancer, pancreatitis, renal disease, hyperprolactinaemia, heliepsy, amylotrophic lateral sclerosis, caute myocardial infarction, infertility, spinocerebellar degeneration, conference of consciousness, and consequence of acute myocardial infarction, infertility, spinocerebellar degeneration, conference of consciousness and for collogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand affecting activation of the G protein-coupled receptor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Best Local Similarity Matches 5; Conserv

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                   Cd derived ligand corresponding to amino acid residues 34 to 53 of the Cs sequence in AAW31368 and is used in an assay to monitor ligand binding Cc to the G protein-coupled receptor protein. Pharmaceutical compositions CC containing this ligand may be used as a pitultary function modulator. A central nervous system modulator or a pancreatic function modulator. CC rhis ligand could have specific applications as a prophylactic or CC therapeutic agent for dementia, depression, hyperkinetic syndrome, CC disturbance of consciousness, anxiety syndrome, schizophrenia, trauma, CC growth hormone secretory disease, hyper- and polyphagia, CC hypercholesterolaemia, hyperglyceridaemia, hyperlipidaemia, for trauma, CC growth hormone neurosis, renders, pancreatitis, renal disease, CC translent brain ischaemia, amylotrophic lateral sclerosis, acute cmyocardial infarction, spinocerebellar degeneration, bone fracture, CC trauma, atopic dermatitis, osteoporosis, asthma, peilepsy, infertility CC and/or oligogalactia. Assays can also be developed to screen compounds which are capable of altering the binding activity of the ligand thus affecting activation of the G protein-coupled receptor protein.

                                                              The present sequence represents a bovine pituitary-derived ligand CC fragment. It is used in the course of the invention. The specification CC describes an agent for modulating prolactin secretion which comprises a CC ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) CC protein. The agents for promoting prolactin secretion can be used for CC treating or preventing hypocovarianism, gonecyst cacogenesis, menopausal CC syndrome, euthyroid or hypometabolism. They can by used for promoting CC lactation in a domestic mammal and as an aphrodisiac. The agents for CC lactation in a domestic mammal and as an aphrodisiac. The agents for CC pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, CC prolactinoma, infertility, impotence, amenorrhea, galactorrhea, CC cromegally, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, CC crobes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. CC modulating placental function can be used for treating or preventing CC chorlocarcinoma, hydatid mole. irrnotion mole. abortion unthrifty fature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          protein-coupled receptor; GPCR; hypoovarianism; gonecyst cacogenesis; menopausal syndrome; euthyroid; hypometabolism; lactation; pituitary adenomatosis; brain tumour; emmeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyazoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAW97232 standard; peptide; 20

                                                                                                The present sequence represents a rat type ligand fragment. It is used in the course of the invention. The specification describes an agent for modulating prolactin secretion which comprises a ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR) protein. The agents for promoting prolactin secretion can be used for treating or preventing hypowarianism, gonecyst cacogenesis, menopausal syndrome, euthyroid or hypometabolism. They can by used for promoting lactation in a domestic mammal and as an aphrodisiac. The agents for inhibiting prolactin secretion can be used for treating or preventing pluultary adenomatosis, brain tumour, emmeniopathy, autoimmune disease, prolactinoma, infertility, impotence, amenorrhea, galactorrhea, caromegaly, Chiari-Frommel syndrome, Argonz-del Castilo syndrome, Forbes-Albright syndrome, lymphoma, Sheehan syndrome or dyszoospermia. The inhibitory agents can also be used as contraceptives. The agents for modulating placental function can be used for treating or preventing choricoarcinoma, hydatid mole, irruption mole, abortion, unthifty fetus, abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                           The present sequence represents a human type ligand fragment. It

CI is used in the course of the invention. The specification describes

CI an agent for modulating prolactin secretion which comprises a

CI ligand polypeptide or a salt, for a G protein-coupled receptor (GPCR)

CI protein. The agents for promoting prolactin secretion can be used for

CI treating or preventing hypocvarianism, gonecyst cacogenesis, menopausal

CI syndrome, euthyroid or hypometabolism. They can by used for promoting

CI lactation in a domestic mammal and as an aphrodisiac. The agents for

CI inhibiting prolactin secretion can be used for treating or preventing

CI pituitary adenomatosis, brain tumour, emmeniopathy, autoimmune disease,

CI prolactinoma, infertility, impotence, amenorrhea, galactorrhea,

CI acromegally, Chiari-Frommel syndrome, Argonz-del Castilo syndrome,

CI modulating placental function can be used for treating or preventing

CI choriocarcinoma, hydatid mole, irruption mole, abortion, unthrifty fetus,

CI abnormal saccharometabolism, abnormal lipidmetabolism or oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 G protein-coupled receptor; GPCR; hypocvarianism; gonecyst cacogenesis; menopausal syndrome; euthyroid; hypometabolism; lactation; pituitary adenomatosis; brain tumour; emmeniopathy; autoimmune disease; prolactinoma; infertility; impotence; amenorrhea; galactorrhea; acromegaly; Chiari-Frommel syndrome; Argonz-del Castilo syndrome; Forbes-Albright syndrome; lymphoma; Sheehan syndrome; dyszoospermia; contraceptive; placental function; choriocarcinoma; hydatid mole; irruption mole; abortion; unthrifty fetus; abnormal saccharometabolism; abnormal lipidmetabolism; oxytocia.
                                                                                                                                                                                                                                                                                                                                                                                                          Use of G protein-coupled receptor ligands - for modulating prolactin secretion or placental function, e.g. for treating menopausal syndrome, tumours, autoimmune disease or abnormal pregnancy

                                                                                                                The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPR10 (human) or UHR-1 (rat). Cells transformed with a vector containing CC the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate C function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of the CC polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Creutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC disbetes; schizophrenia; disorders of growth hormone secretion; cancer; CC carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide encoding DNA or its mutein are used to carrying the ligand polypeptide encoding DNA or its mutein are used to study the function of the polypeptide expressing genes, as models of CC disease, for drug screening and as source of cell lines. The ligand CC entitled sequence; in receptor-binding assays; for production of Ab and CC antitaca; in drug development for the polypeptide and to develop the polypeptide encoding assays; for production of Ab and CC antitaca; in drug development for the polypeptide encoding assays; for production of Ab and CC antitaca; in drug development for the polypeptide encoding assays; for production of Ab and CC antitaca; in drug development for the polypeptide encoding assays; for production of Ab and CC antitaca; in drug development for the polypeptide encoding assays; for production of Ab and CC antitaca; in drug development for the polypeptide encoding assays; for production of Ab and CC antitaca; in the control of the polypeptide encoding assays; for production of Ab and CC antitaca; in the control of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                   The invention relates to a murine pituitary-derived ligand polypeptide CC which is a ligand for the G-protein coupled orphan receptor designated CC GPRIO (human) or UHR-1 (rat). Cells transformed with a vector containing CC the ligand polypeptide encoding DNA are used to produce a recombinant CC ligand polypeptide. The ligand polypeptide, and its fragments, modulate CC function of the pituitary, central nervous system, pancreas and other CC tissues and can be used to screen for agents that modulate binding of CC the polypeptide to the receptor; to quantify the amount of receptor in a CC sample and to raise antibodies. They may also be used therapeutically, CC e.g. to treat senile dementia; Alzheimer's, Parkinson's or Huntington's CC diseases; Crutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; Crutzfeld-Jakob disease; poisoning by heavy metals or drugs; CC diseases; critzophrenia; disorders of growth hormone secretion; cancer; CC operative nutritional status and as vasopressor. Transgenic animals CC carrying the ligand polypeptide encoding DNA or its mutchin are used to study the function of the polypeptide encoding DNA or its mutchin are used to Study the function of the polypeptide encoding probes and primers; to identify CC disease, for drug screening and as source of cell lines. The ligand CC polypeptide DNA is used as a source of probes and primers; to identify centres which can be used for the normaration of anti-linear development; for gene therapy and to develop the purch for the polypeptide.

CC centories which can be used for the normaration of anti-linear control protein development identifies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Best Local Similarity

- CATALYTIC ACTIVITY: ATP + UBIQUITIN + PROTEIN LYSINE = AMP + PYROPHOSPHATE + PROTEIN N-UBIQUITYLLYSINE.

- PARTHAAY: SECOND STEP IN UBIQUITIN CONJUGATION.

- MISCELLANEOUS: A CYSTEINE RESIDUE IS REQUIRED FOR UBIQUITIN-
THIOLESTER FORMATION (BY SIMILARITY).

- SIMILARITY: BELONGS TO THE UBIQUITIN-CONJUGATING ENZYME FAMILY.
